Staph species		<300	300-500	500-700	>750
Mycoplasma		0	>0	>0	>0

[†] Results will be faxed unless other wise indicated.

The above table is an aid in interpreting your bulk tank sample results. If your results fall within the low range, you are probably doing a good job controlling mastitis and have good milking procedures. If your results are in the moderate to high levels, you may want to implement some changes. Please refer to the table below for some general suggestions, and contact your veterinarian if you need further assistance in addressing a mastitis problem.
